EDUCATION

The London School of Economics and Political Science – MSc Data Science, Grade: *TBD* *2025 - 2026*

- Courses: Distributed Computing for Big Data, Machine Learning and Data Mining, Multivariate Methods

University of Nairobi - BSc. Economics and Statistics, Grade: First Class Honors *2016 - 2020*

- Strong foundation in probability theory, statistical inference, regression, econometrics, and mathematical statistics
- Graduated top of class and Faculty of Arts and Social Sciences; awarded five university prizes including best overall student in the faculty and best student in BSc Economics and Statistics (link 1, link 2)

WORK EXPERIENCE

Blavatnik School of Government, University of Oxford

Research Assistant *May '26 - Present*

Contributing to Rosa: Oxford project building an AI chatbot for survivors of modern slavery to access their rights & support

- Designing the website that hosts Rosa and integrating the chatbot into it
- Building a secure database for ethical data collection and setting up the analytics
- Creating QR codes for placement in community settings (GP clinics, churches) so victims can scan & access chatbot
- Contributing to UX evaluation and ethical review

The Boston Consulting Group *(select project experience)*

Consultant *Sep '24 – Jun '25*

- Contributed to a national AI strategy for a government ministry, defining priority use cases across agriculture, healthcare, and education; benchmarked national AI approaches (Singapore, Estonia, UAE) and helped structure a projected funding pipeline targeting major development funders.
- Worked alongside BCG X on geospatial analysis of a national mobile money agent network, translating coverage and whitespace findings into agent-placement recommendations to extend financial access in underserved regions.
- Built ROI and scenario models for a red meat sector investment case, sizing a ~$3B addressable market for GCC export corridors and modelling the operational scale required to reach break-even.

Senior Associate *Dec '23 - Aug '24*

- Owned end-to-end launch and delivery of the 2024 JICA-HGS healthcare accelerator, defining selection criteria for 100+ applications, leading a team of three through due diligence on 30 finalists, and shipping advisory engagement for 10 selected companies; coordinated cross-functional stakeholders through a weekly delivery cadence.
- Analyzed operations of a conglomerate's five business units, identifying $2M in annual cost savings through centralized cost-cutting measures

Associate *Jun '22 - Nov '23*

- Ran field research with 500+ value chain actors, synthesised findings into investment recommendations, and presented to 100+ participants from 14 countries at a 3-day networking event
- Designed a two-axis scoring framework to prioritize 30 shortlisted startups for an Africa-wide healthcare accelerator; ran due diligence, documented scoring rationale, and presented final selection of 10 companies to the selection committee

Business Analyst *Jun '21 - May '22*

- Designed a multi-criteria prioritization framework to evaluate 300+ companies across sub-Saharan Africa, identifying 3 high-potential candidates to advance for growth support
- Led company profiling, competitive positioning and growth analysis for the sell-side due diligence of a grocery retail chain for a PE firm, sizing store-expansion whitespace location by location; asset subsequently sold

PROJECTS (MSc coursework)

- Feature Selection for High-Dimensional Neural Decoding - Compared 6 feature selection methods (Forward Stepwise, mRMR, Lasso, Elastic Net, Random Forest and Gradient Boosting importance) on a neuroscience dataset where features vastly outnumbered samples (11,190 features, 683 trials)
- Distributed CTR prediction at scale - Designed a PySpark pipeline on Google Cloud Dataproc to predict click-through rates on the Avazu dataset. Task involved comparing local and global models (logistic regression) and if we could uncover whether partitioning the dataset was worth the computational complexity. Trained a per-channel local logistic regression using Spark mapPartitions and scikit-learn, benchmarked against a Spark MLlib global baseline; ran size-up scalability experiments across 25%–100% of data, showing 3.6x scaling on the channel-partitioned model at 4x data

LEADERSHIP & EXTRACURRICULAR

- Academic Representative, MSc Data Science: Proposed the case to change the 1-year MSc Data Science program to 2 years, ran a student survey to evidence demand, and submitted a formal proposal now under faculty review
- Part of the Finance & Sponsorship, LSE Africa Summit 2026: raised £20,000+ in sponsorship
- Mentor, Project Girls For Girls Kenya (2021-present): mentor 6 women on leadership, negotiation, and decision-making

ADDITIONAL SKILLS

- Tools: Python (pandas, scikit-learn, PySpark, statsmodels), R, SQL, Alteryx, Tableau, Git, LaTeX
- Distributed and cloud: Apache Spark, Google Cloud Platform (Dataproc, GCS)
- Languages: Fluent English and Kiswahili, limited working proficiency in Arabic
